SUMMARY

Consultant with 3 years of Big Four experience delivering Data & AI strategy, data governance and regulatory transformation across public-sector, banking and global logistics clients. Experience includes leading a 31-entity, 100+ stakeholder CSRD reporting workstream, shaping an organisation-wide AI strategy and Target Operating Model, and leading key components of a bank-wide Data Quality transformation with ~€11M estimated combined impact across 40 prioritised issues. Combines structured problem solving, C-level communication and hands-on data and analytics expertise.

EXPERIENCE

KPMG **Brussels, Belgium**

Consultant, Data & AI Transformation ***Sep 2023 – Present***

Public Sector | AI Strategy, Governance & Transformation

- Developed an organisation-wide AI strategy and Target Operating Model, translating EU AI Act requirements into practical governance, decision rights and a structured implementation roadmap.
- Assessed and prioritised 10 AI use cases across value, feasibility, risk and readiness and structured a 12-person cross-functional AI working group across management, business and IT.
- Designed and delivered a four-part mandatory AI learning programme covering AI fundamentals, AI fluency, Microsoft Copilot and Copilot Studio.

Banking | Data Quality, Governance & Regulatory Transformation

- Designed governance councils, accountability structures and a Jira-based issue-management approach for a portfolio of ~300 Data Quality issues, including 40 prioritised issues representing ~€11M estimated combined impact.
- Led key components of a Data Quality and Data Governance transformation in a European supervisory context, translating BCBS 239 / RDARR expectations into practical governance and remediation processes across multiple domains.
- Defined Data Quality KPIs and C-level progress reporting, operationalised Collibra governance workflows and translated between technical delivery teams and senior management.

Global Postal & Logistics | CSRD Reporting Transformation

- Led the sustainability-reporting workstream across 31 reporting entities in multiple countries and 100+ stakeholders, coordinating ESG data, governance and Kanban-based delivery through a ~200-page sustainability report and successful external audit.
- Developed reporting templates, entity guidance and audit-evidence processes to improve consistency, traceability and data quality across the reporting landscape.
- Designed and built an automated CSRD readiness application linking ESRS regulatory requirements to reporting datapoints to track coverage, gaps and reporting preparedness.

Additional Data & Analytics Experience

- Flemish Social Services Agency: Defined business requirements and target data-model needs for a Databricks-enabled platform transition, coordinating migration activities and Power BI enablement.
- Belgian Higher-Education Institution: Designed a role-based analytics navigation experience and challenged KPI definitions, report logic and visual design to improve usability and adoption.
